

Man-cave cinema — speaker layout

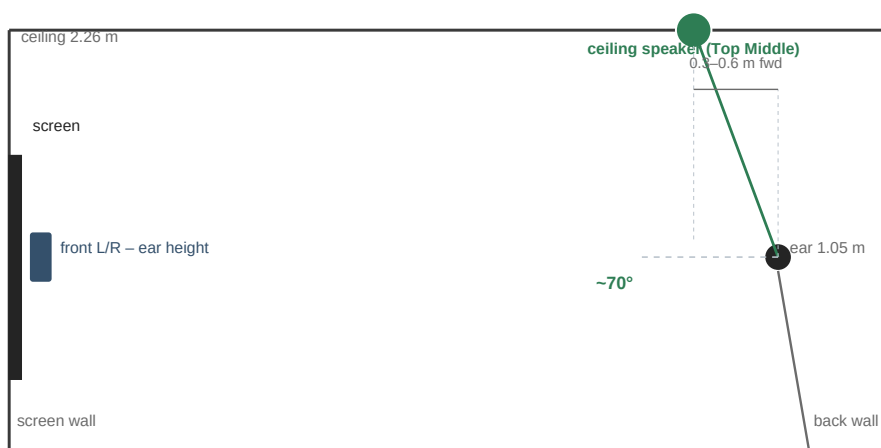

Denon AVR-X1800H · Wharfedale DX-3 (5.1) + 2× Yamaha NS-IC600 ceiling · 5.1.2 Dolby Atmos, 'Top Middle'. Room 4.7 × 4.5 m, ceiling 2.26 m, seat 4.1 m from screen.

Position summary (from the screen wall, room centre-line)

Speaker	Front-to-back	Off centre / wall	Height & aim
Centre	front wall, under screen	centred	as high as possible under screen, tilt up at seat
Front L/R	front wall plane	~1.7 m each side	tweeter ~1.05 m (seated ear), toe in → ~22°
Surround L/R	~4.3–4.4 m (just behind seat)	on the side walls	~1.7–1.9 m high, angled down/in
Ceiling TML/TMR	3.5–3.8 m from screen	0.7 m each side (1.4 m apart)	in ceiling; pivot tweeter to seat if it moves
Subwoofer	front third	near front corner	floor; fine-tune by 'sub crawl'

Side view & receiver setup

Side view — nudge the ceiling pair slightly forward so the sound comes down at $\sim 70^\circ$, not straight onto your head.

Why 'Top Middle' (not Top Front)

- Dolby recommends the **Top Middle** position for a single overhead pair.
- Your seat is far back (4.1 m of 4.7 m), so **Top Front** would sit >1 m in front of you and pull the overhead effect toward the screen. Top Middle keeps it over your head, where the envelopment is.
- No room behind the couch for rears anyway — Top Middle is doubly the right call.

Denon AVR-X1800H settings

- Speaker Config $\rightarrow$ **Amp Assign = 7.1ch**, then **Height = Top Middle**.
- Run **Audyssey MultEQ** with the mic at **ear height at the main seat** first.
- Set the small DX-3 satellites to **Small** and lift their **crossover to ~ 120 Hz** (80 Hz leaves a hole).
- One sub is fine — the two SUB outputs just carry the same signal.

Install notes

- Suspended ceiling: **brace the tile/grid** and add a **back-box or insulation blanket** above each ceiling speaker so tiles don't buzz and you keep some low end.
- Get all five ear-level tweeters as close to **seated ear height** as you can; toe them in at the seat.
- 4.1 m from a 96" screen is a comfortable but relaxed $\sim 29^\circ$ view — fine, just on the back-row side if you ever fancy a bigger screen.

Guide layout for planning — trim to suit your seating and joist positions, then let Audyssey set final levels and distances.
